Description
Commercial Cement Plaster (CCP) Base – Sanded is a proprietary blend of graded plaster sand, alkali resistant fibers and cementitious admixtures. After mixing with water at the jobsite, CCP Base – Sanded may be used in any Dryvit CCP system.

Uses
CCP Base may be applied directly to concrete and CMU substrates or to approved, paper backed, expanded metal, welded, or woven wire lath installed over a code approved water-resistive barrier.

Coverage
A 80 lb (36.3 kg) bag of CCP Base - Sanded will yield 0.83 cu ft (23 L) of material. Coverage is approximately 12.4 ft² (1.15 m²) per bag at 19 mm (3/4 in) thickness.

Cautions and Limitations
- Avoid applying CCP Base in direct sunlight. Always work on the shady side of the wall or protect the area with appropriate shading material.
- Use only clean, potable water for mixing. Do not over water.

Coating/Finish
- Ensure surface is clean, dry and free of contaminants or efflorescence prior to application of approved Dryvit coatings or finishes.

Clean-Up
- Clean tools with water while product is still wet.

Storage
Store materials on pallets, wrapped or covered, protected from the weather and direct sunlight until just before mixing. Minimum storage temperature for wet goods shall be a minimum of 40 °F (4 °C) and a maximum of 100 °F (38°C) in tightly sealed containers protected from weather and out of direct sunlight.

Technical and Field Services
Available on request.
