PRODUCT DESCRIPTION

Backstop NT is a flexible, polymer-based, noncementitious, air/water-resistive barrier, which resists water penetration, eliminates air infiltration, and is vapor permeable. It is classified as a Class III vapor retarder over vertical above grade walls. Backstop NT is available in three versions:

- **Backstop NT - Texture** is applied using a trowel, roller, or texture spray equipment.
- **Backstop NT - Smooth** is applied by roller or texture spray equipment.
- **Backstop NT - Spray** is applied by airless spray equipment.

USES

Backstop NT – Texture, Smooth and Spray are designed for use with Dryvit EIF Systems as well as other building cladding systems. When used with the Dryvit AquaFlash® System or Dryvit Flashing Tape™, Backstop NT provides an effective air barrier and water-resistive membrane for acceptable substrates.

FEATURES & BENEFITS

<table>
<thead>
<tr>
<th>FEATURE</th>
<th>BENEFIT</th>
</tr>
</thead>
<tbody>
<tr>
<td>Includes a reinforcing fabric at sheathing joints</td>
<td>Ensures a continuous film barrier across transitions</td>
</tr>
<tr>
<td>Bonds to most construction materials</td>
<td>No need for multiple products</td>
</tr>
<tr>
<td>Fluid applied/Fast drying</td>
<td>Easy to use</td>
</tr>
<tr>
<td>Can be exposed for 180 days</td>
<td>Not subject to tear off or damage from wind</td>

PROPERTIES

Working Time: Backstop NT - Texture, Smooth and Spray are noncementitious, water based materials and will not set-up in the pail. Keep pail covered when not in use to minimize skinning.

Drying Time: The drying time is dependent upon the air temperature, wind conditions and relative humidity. Under average drying conditions [70 °F (21 °C), 55% R.H.], Backstop NT will be dry to the touch within 2 hours and cure in 6 hours.

Testing Information: For test data refer to the chart included with this document.

Application Procedure: For complete application instructions, refer to, DS181.

Job Conditions: Air and surface temperature for application of Backstop NT must be from 40 °F (4 °C) minimum to 100 °F (38 °C) maximum and must remain so for a minimum of 12 hours.

Temporary Protection: Shall be provided at all times until membrane is dry and shall not be exposed to weather for longer than 180 days prior to installation of the specified cladding.
Acceptable Substrates:
All sheathing substrate joints must be treated with Dryvit Grid Tape and Backstop NT - Texture prior to application over the full sheathing surface. Acceptable substrates include:

a. Core treated exterior grade gypsum sheathing meeting ASTM C 1396 (formerly C 79).
b. Core treated exterior grade gypsum sheathing with fiberglass mat facers meeting ASTM C 1177.
c. Exterior fiber reinforced cement or calcium silicate boards.
d. APA Exterior or Exposure 1 Rated Plywood, Grade C-D or better, nominal 1/2 in (12.7 mm) minimum, installed with the C face out.
e. APA Exterior Grade Fire Retardant Treated Plywood, nominal 1/2 in (12.7 mm) minimum, installed with the C face out.
f. APA Exposure 1 Rated OSB, nominal 1/2 in (12.7 mm) minimum. Note: Applications over OSB sheathing requires a minimum of 2 coats of Backstop NT – Smooth or Spray. Backstop NT – Texture is not recommended for the field of wall application over OSB.
g. Unpainted, unsealed concrete and CMU.

PROPERTIES
Acceptable Substrates:
All sheathing substrate joints must be treated with Dryvit Grid Tape and Backstop NT - Texture prior to application over the full sheathing surface. Acceptable substrates include:

a. Core treated exterior grade gypsum sheathing meeting ASTM C 1396 (formerly C 79).
b. Core treated exterior grade gypsum sheathing with fiberglass mat facers meeting ASTM C 1177.
c. Exterior fiber reinforced cement or calcium silicate boards.
d. APA Exterior or Exposure 1 Rated Plywood, Grade C-D or better, nominal 1/2 in (12.7 mm) minimum, installed with the C face out.
e. APA Exterior Grade Fire Retardant Treated Plywood, nominal 1/2 in (12.7 mm) minimum, installed with the C face out.
f. APA Exposure 1 Rated OSB, nominal 1/2 in (12.7 mm) minimum. Note: Applications over OSB sheathing requires a minimum of 2 coats of Backstop NT – Smooth or Spray. Backstop NT – Texture is not recommended for the field of wall application over OSB.
g. Unpainted, unsealed concrete and CMU.

SURFACE PREPARATION

- Sheathing board gaps shall not exceed 1/4 in (6.4 mm) and the surface must be flat within 1/4 in (6.4 mm) in any 4 ft (1.2 m) radius. CMU mortar joints shall be struck flush (tooled mortar joints and heavily textured CMU [not split faced] shall be skimmed with Dryvit Genesis®, Genesis® DM or Genesis® DMS) prior to application of the Backstop NT – Texture or Spray. CMU shall be clean, unpainted and free of efflorescence. All substrates shall be dry and free of foreign materials such as dirt, dust, oil, paint, wax, water repellants or other materials that inhibit adhesion.

- Concrete: Shall have cured a minimum of 28 days prior to application of the finishes. If efflorescence, form release agents or curing compounds are present on the concrete surface, the surface shall be thoroughly washed with muriatic acid and flushed to remove residual acid. All projections shall be removed and small voids filled with Dryvit Primus®, Primus®DM, Genesis®, or Genesis®DM mixture (see product data sheets for mixing and application).

- All substrate transitions and gaps between openings and penetration components such as windows, doors, electrical boxes, etc., shall be treated with Backstop NT - Texture, Dryvit AquaFlash®, or Dryvit FlashingTape™. Any sealants used shall be tested for compatibility and comply with ASTM C 920.

- All opening terminations, roof/wall intersections, transitions between different materials, chimneys, decks, roof, windows, etc., must be properly flashed, wrapped and sealed as required by the building code, good construction practice and/or Dryvit Backstop NT Application Instructions, DS181.

MIXING
Material is ready for use after an initial spin-up using a drill with paddle mixer. DO NOT ADD CEMENT.

APPLICATION
Backstop NT Application: Refer to the usage/application chart for the appropriate use and application technique for a given substrate.

DS455
CAUTIONS & LIMITATIONS
- Apply to acceptable substrates only.
- Avoid applying Backstop NT in direct sunlight. Always work on the shady side of the wall or protect the area with appropriate shading material.
- CMU - Application over unpainted concrete and CMU requires one of the following:
  a. Two coats of Backstop NT- Texture, spray or roller-applied.
  b. Two coats of Backstop NT - Spray.
  c. One coat of Backstop NT – Texture, trowel applied.
- Shall not be used below grade or on surfaces that will be subjected to water immersion.
- Shall not be used to treat holes or sheathing joints exceeding 6.4 mm (1/4 in).
- When used beneath Portland cement stucco or adhered stone products, paper backed lath shall be installed over Backstop NT as a slip sheet.
- Backstop NT can be exposed to weather up to 180 days to provide sufficient time for installation of the cladding. Inspect the surface of the Backstop NT for any damage, cracks, voids or other detrimental conditions and repair prior to installation of the cladding. The Backstop NT surface shall be clean, dry and free of any detrimental conditions that may affect adhesion.

CLEAN UP
Clean tools with water while material is still wet.

TECHNICAL AND FIELD SERVICES
Available on request.
**Backstop NT (BSNT) – Texture, Smooth, and Spray**

**Approx. Coverage Per Pail** | **Approx. Coverage Per Drum**
--- | ---
**Exterior Grade Gypsum Sheathing**
Joints | BSNT - Texture | Trowel | 300 lin. ft (91 m)
--- | --- | --- | ---
Face | BSNT - Texture | Trowel, FoamPRO #58 Roller or Texture Sprayer | 250-300 ft² (23-28 m²)
--- | BSNT - Smooth | 1/2 in (12.7 mm) Nap Roller or Texture Sprayer | 500 ft² (46 m²)
--- | BSNT - Spray | Airless Spray | 500-600 ft² (46-56 m²)
**Fiberglass Faced Exterior Gypsum Sheathing**
Joints | BSNT - Texture | Trowel | 300 lin. ft (91 m)
--- | --- | --- | ---
Face | BSNT - Texture | Trowel or Texture Sprayer | 250-300 ft² (23-28 m²)
--- | BSNT - Smooth | 3/4 in (19 mm) Nap Roller or Texture Sprayer | 400 ft² (37 m²)
--- | BSNT - Spray | Airless Spray | 500-600 ft² (46-56 m²)
**Exposure 1, Exterior Grade, and Fire Retardant Treated Plywood and Exterior Cement Board**
Joints | BSNT - Texture | Trowel | 300 lin. ft (91 m)
--- | --- | --- | ---
Face | BSNT - Texture | Trowel, FoamPRO #58 Roller or Texture Sprayer | 250-300 ft² (23-28 m²)
--- | BSNT - Smooth | 1/2 in (12.7 mm) Nap Roller or Texture Sprayer | 400 ft² (37 m²)
--- | BSNT - Spray | Airless Spray | 500-600 ft² (46-56 m²)
**APA Exposure 1 Rated Oriented Strand Board (OSB)**
Joints | BSNT - Texture | Trowel | 300 lin. ft (91 m)
--- | --- | --- | ---
Face | BSNT - Smooth | 1/2 in (12.7 mm) Nap Roller or Texture Sprayer | 350-400 ft² (33-37 m²), applied in 2 coats, backrolled
--- | BSNT - Spray | Airless Spray | 3,500-4,000 ft² (325-372 m²)
**Concrete and Masonry**
Face | BSNT - Texture | Trowel | 200-250 ft² (19-23 m²), applied in 1 coat
--- | BSNT - Texture | FoamPRO #58 Roller or Texture Sprayer | 200-250 ft² (19-23 m²), applied in 2 coats, backrolled
--- | BSNT - Spray | Airless Spray | 300-500 ft (28-46 m²)

* Tape the joints with Dryvit Grid Tape prior to application of Backstop NT - Texture at joints and screw heads.
* Up to 1 pint (16 oz) of water may be added to a 60 lb pail of Backstop NT - Texture for roller or spray applications only. The FoamPRO #58 roller cover (FoamPRO Mfg. Inc., www.foampromfg.com) is available at home supply stores.
* Because of application methodology and absorptive surface differences, two coats may be required to obtain this coverage.
* Due to variations in types of concrete/masonry, apply a 6 ft x 6 ft test area with coverage as indicated in the chart, before proceeding with the entire job. If there are voids in the substrate, particularly at the mortar joints, the job should be parged with Genesis®, 24 hours prior to BSNT - Texture application. Backstop NT shall NOT be used as a skim coat for parging CMU joints or heavy textured units.
* Backstop NT - Texture (with up to 1 pint water addition per 60 lb. pail) or Smooth may be sprayed and backtrowelled/backrolled.
* Coverage may vary depending on the texture and porosity of the substrate. Coverage assumes a smooth, dense surface.
* Backstop NT should be applied at the recommended coverage rates to form a continuous film free of voids, pinholes or other discontinuities. The following approximate mil thicknesses are recommended:
  - Backstop NT Texture: 12 DFT 20” WFT
  - Backstop NT Smooth: 12 DFT 20” WFT
  - Backstop NT Spray: 9 DFT 15” WFT

*Based on volume solids

Refer to Product Data Sheets for Complete Mixing and Application Instructions.
