

SHIELDIT®

A highly-durable acrylic polymer-modified base coat designed to protect against woodpecker and pest damage

Product Overview

ShieldIt® is a proven solution for warding off woodpeckers and providing greater impact resistance to exterior finish and insulation systems (EIFS), through a proprietary composite base coat.

The combination of the two ShieldIt Base Coat layers changes the surface characteristics to deter woodpeckers from damaging the lamina in either new or existing EIFS assemblies. This composite layer significantly increases the point-impact resistance of the final lamina, and can also be used in existing areas where Dryvit's impact-resistant Panzer® reinforcing mesh cannot be incorporated, such as architectural profiles, decorative trims and more.

Applications:

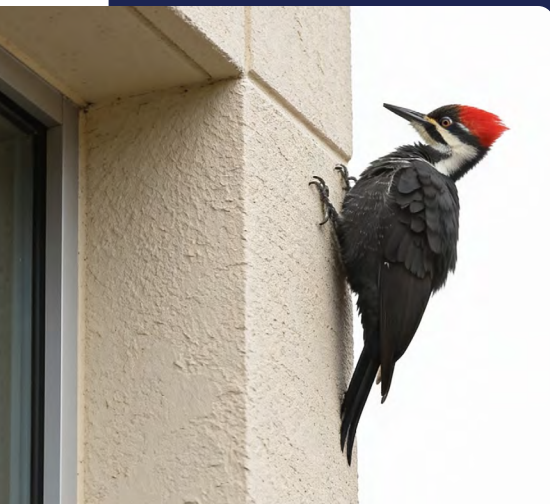

- + Over existing EIFS
- + As a base in new EIFS
- + On architectural profiles, decorative trims, and other areas where reinforcing meshes cannot be used
- + As an added line of defense against damage from woodpeckers and other pests

175x
STRONGER

Over 175x Point Impact Resistance

ShieldIt's proprietary composite base coat formulation provides over 175 times the point impact resistance of standard EIFS — providing unmatched protection from woodpecker damage.

Woodpecker Facts

- ✓ Woodpeckers are territorial and often return to the same location year after year
- ✓ Once the bird realizes it cannot penetrate the system, it will typically move on to another, unprotected location.
- ✓ Many holes created by woodpeckers are later occupied by other birds and rodents, not necessarily the original woodpecker.
- ✓ Rodents and other pests can gain access to the wall assembly and create secondary tunnels and nesting areas within a system's insulation

ShieldIt Features & Benefits

- ✓ **Extreme Durability:** Specifically formulated to protect exterior finish and insulation systems from woodpecker damage
- ✓ **Excellent Adhesion:** Wet polymer-modified formulation provides powerful adhesion to many substrates
- ✓ **Easy to Use:** Proprietary aggregates can accurately govern the thickness of each coat
- ✓ **Finish Compatibility:** ShieldIt can boost the durability of a wide variety of Dryvit textures, colors and specialty finishes

HOW TO FINISH YOUR SHIELDIT® SYSTEM:

1 PICK AN EYE-CATCHING TEXTURE

Whether you're looking to create a contemporary, historical or completely unique look for your project, we have the solutions to help you achieve your goal. Dryvit's range of textures are available in an incredible array of standard and custom colours to your building stand out.

2 PAIR IT WITH A BOLD, LASTING STRATOTONE® COLOR

Bright, bold, fade-resistant textured finishes and coatings are easily achieved with StratoTone colorants from Dryvit. It is well known that designing with expressive color has been limited by the low UV-resistance of many commercial pigment systems. StratoTone raises the bar of color science to a whole new level of stability and color brightness, and does so with virtually no VOC or APEO content.

Features & Benefits of StratoTone Technology:

- High-Performance Colorants
Resist Fading Longer
- Environmentally Friendly:
No VOCs or APEO
- Ideal for Bright, Bold Colors
- 250+ Standard Dryvit Colors
Backed by 10-Year Warranty
- Custom Colors Backed by
a 5-Year Warranty
